

# Accessibility Interview Questions

1. Why is keyboard accessibility important?
2. How do you ensure components are keyboard navigable (tabIndex, role, key events)?
3. What are ARIA roles, and when should you use them?
4. How does semantic HTML improve accessibility?
5. What is focus management and why is it important?
6. How do you trap focus in modals or dialogs?
7. What is color contrast ratio and what are WCAG requirements?
8. How do you ensure accessible color choices?
9. What tools do you use to test accessibility? (e.g., Axe, Lighthouse, NVDA, VoiceOver)
10. How do browser DevTools help with accessibility checks?
11. What are the most common accessibility issues in frontend?
12. How do you approach fixing accessibility in an existing application?
13. What are best practices for building accessible components?
